IT PLUS Technologies Fortifies Its Support for Europe

IT PLUS Technologies, an elite back office and software R&D services house expands its presence in Western Europe. In January 2005 IT PLUS Technologies launched its development center in Kochi, India and partnered with an Austrian-based telecommunications company, MITACS headquartered in Vienna, to better serve their global customers, especially in Europe.

Earlier 2009, IT PLUS Technologies took part in ITnT trade fair for information technology and telecommunications in Vienna, where we exhibited our new, intelligent solutions for various business verticals, outlining the possibilities to cut costs using the right combination of frameworks and services.

This event reconfirmed the importance of Western European market for IT PLUS Technologies growth strategy. The response was not less than positive for an emerging company like IT PLUS Technologies. Currently serving few customers in Germany and Austria, IT PLUS Technologies targets to double and triple the share of EU clients over the following years.

Having a development center in India and, a local representative based in Austria to spearhead the marketing has helped us to stand out from other outsourcing crowd. Moreover a team of German-speaking staff greatly simplifies our communications with clients and their customers who wanted to express their opinion in native language.

"There is a real team spirit and support from IT PLUS Technologies professionals which is necessary for us to achieve our targets and make our products and services globally successful. We have been recommending IT PLUS Technologies to most of our clients and others who are partnering with us" - Georg Hitsch, CIO and Head of Operations, Mitacs Telekomservice GmbH.

We invite all European companies and organizations interested in high-quality back office or software services to call IT PLUS Technologies for additional information.

IT PLUS Technologies Joins Hands with HealthCare Communication Technology GmbH to Develop State-of-the-art Solutions for Patient Safety and Quality Management in Health care

Being a pioneer in the outsourcing industry, IT PLUS technologies explores every avenue in its zeal to promote itself as the most attractive and reliable back office and software outsourcing company. Our team is eager to discuss all aspects of outsourcing to India and contribute to various projects and client issues. The most demonstrative example of that was the project from HealthCare Communication Technology GmbH to develop state-of-the-art solutions for patient safety and quality management in health care, where IT PLUS Technologies has offered a dedicated team for the development of the project till the implementation.

Healthcare is one of the most developing areas around the world. Along with the developments there are many challenges that need to be met in this area. Information Technology has played a major role in meeting these challenges and there is also a great push for adopting IT strategies in the development and procurement of information technology in health services across the globe. If delivered in a better way technology can contribute enormous benefits to the healthcare industry.

IT PLUS Technologies has always managed to maintain a disciplined and dedicated approach in delivering solutions to healthcare industry by leveraging its great infrastructure as well as technology know-how by our software engineers. This assures that our clients receive the best quality software products that are both cost efficient and standardized. The challenge was to develop a web based solution to improve patient safety and quality management in healthcare, which includes data mining/collection in conjunction with voice recording, VoIP and web based database solutions and collection, recording, documentation and analysis of safety data from patients in conjunction with medication and treatment.

About IT PLUS Technologies
